BURGER BOATS COUNT ON DELTA "T" SYSTEMS TO DELIVER

Burger Boats will install Delta "T" Systems ventilation products on all its 500 series hulls, including the Sycara. (Rendering courtesy of Burger Boats.)

Luxury boat owners have high expectations when it comes to how their craft look and perform. To ensure optimum engine performance for their clients, Burger Boats is installing Delta "T" Systems ventilation products on all its 500-series yacht hulls, which start at 98'.

Burger expects to finish five or six craft this year, all of which will feature full ventilation systems that include moisture eliminators, fans and P/T4™ control systems as well as smoke and fire dampers. **The company has installed Delta "T" Systems' components on each yacht it has built for the last several years because they are cost-effective and efficient products, according to Burger engineer, Jason Allard.**

"Delta 'T' Systems has a good reputation among our clientele and they offer the best price available in the market," said Allard. "Their products are reliable and Burger has been using them for the last five years."

The P/T4 control system features greater processing power for precise fan control and faster response to changes in engine room pressure or temperature.

Founded in 1863 in Manitowoc, Wisconsin, Burger Boats is the oldest custom yacht builder in America. Based in Riviera Beach, Florida, Delta "T" Systems creates reliable and efficient marine engine room ventilation management products for recreational, commercial and pleasure boats.
