YACHT BUILDER INSTALLS LEADING VENTILATION EQUIPMENT

Delta "T" Systems installed its ventilation equipment on Grand Banks' 58' yacht.

Grand Banks Yachts of Newport, Rhode Island, is recognized for superior quality. Its newest model, the Grand Banks 58' Eastbay Flybridge, will continue the company's tradition of first-class craftsmanship by including Delta "T" Systems' advanced ventilation equipment.

Since the Grand Banks 58' yacht is powered by twin Cat 3406C 800-hp engines, an abundance of fresh, dry air is essential. Delta "T" Systems installed axial intake and exhaust fans to maintain sufficient airflow. The company also equipped the craft with moisture eliminators to

help prevent engine corrosion and wear, and ensure the air supplied to the engine and mechanical rooms is free of sea spray.

"We chose Delta "T" Systems' products because they are the best in the market for the size boats we build," said Scott Kinney of Grand Banks Yachts. "In some boats, one can find salt residue throughout the engine room, but not when using Delta "T" Systems' equipment."

The long-range cruising speed on the Grand Banks 58' is 27 knots, while the cruising speed is 23 knots. Its modified deep-V hull produces a seaworthy and comfortable ride. The company has been building boats for over 40 years and is known for its long-range cruising performance capability. More information can be obtained by visiting www.grandbanks.com.
