## NEW MOTORYACHT CARRIES ADVANCED VENTILATION SYSTEM

The *Alexa C<sup>2</sup>* built by Nordlund Yachts, carries ventilation products from Delta "T" Systems.

Known for its high-quality, custom-built yachts and commercial craft, Nordlund Yachts of Tacoma, Washington, recently delivered its latest project—the 114' x 24' motoryacht *Alexa C<sup>2</sup>*. The new yacht carries a full complement of engine room ventilation products from Delta "T" Systems.

Since the *Alexa C<sup>2</sup>* is powered by two, 1,800-hp 16V2000 Detroit/MTU diesels, an abundance of fresh, dry air is essential. Nordlund equipped the yacht with two of Delta "T"'s 19" intake and exhaust fans to maintain adequate airflow, plus moisture eliminators to help prevent engine corrosion and wear. Control dampeners are used to restrict airflow in the unlikely event of fire, while an electronic fan controller automatically regulates engine room temperature and pressure.

Paul Nordlund, company president, said, "The owner of the new motoryacht is actually a repeat customer—we built a 74' yacht for him before. Likewise, our company is a repeat customer of Delta "T" Systems. We have used their products on a number of our projects in the past and have complete confidence in their equipment."

Nordlund Yachts can be phoned at 253-627-0605 or faxed at 253-627-0785.
