NORDLUND BOAT COMPANY CELEBRATES 50TH ANNIVERSARY

Known for its distinctive, one-of-a-kind yachts and commercial craft, Nordlund Boat Company, Inc., of Tacoma, Washington, celebrates its 50th anniversary this year. To satisfy discriminating customers through the years, the yachts feature comprehensive engine room ventilation products from Delta "T" Systems.

"To mark this impressive anniversary," said Delta "T" president Lynn Oien, "we thought it fitting to celebrate the achievement with a formal presentation at a recent boat show. We've had the pleasure of working with Nordlund for more than 12 years."

Nordlund was founded in 1958 by Norm and Phyllis Nordlund and Walt Silva. At their side from the day they could walk were the Nordlund children, Paul, Gary and Karen. Today the company is run by Paul and Gary.

"Family-run boat yards are rare today," said Paul Nordlund, president. "Rarer still are those that have been around for 50 years. Our team includes craftsmen who have been with us longer than some boatyards have existed."

Since switching to fiberglass in the early 1970s, Nordlund has been devoted to building the highest quality boats with progressive technology, craftsmanship and attention to detail. Nordlund yachts are 100% custom-

-more-

built to the owner's specifications.

Each yacht is unique, to the point that Nordlund does not use model numbers or "fancy names," unless the owner really wants one, in which case "we'd be happy to make one up." Working closely with owners during the building process is important to the Nordlunds, believing that designing and building should be as fun as boating itself.

"We choose Delta "T" Systems simply because they manufacture a great product that fits the needs of our boats," said Gary Nordlund, vice president. "They are wonderful to work with and very responsive, which makes a huge difference to our clientele."

Delta "T" provides every state-of-the-art system needed to keep engine rooms well-ventilated and dry. Corrosion is prevented by moisture eliminators that keep saltwater and spray from entering the engine room. Air flow is guaranteed to be smooth with heavy-duty axial fans that adjust automatically.

The P/T4 control system, fans, dampers and moisture eliminators are custom-designed for each Nordlund yacht. Owners realize significant costs savings in terms of fuel and engine overhaul expenses.
