

OCEAN ALEXANDER CHOOSES DELTA "T" VENTILATION SYSTEMS

Luxury yacht-builder Ocean Alexander's business motto is, "Where obsession takes you." Since 1978, this obsession, which originally spanned the Pacific Ocean from Washington to Taiwan as a mutual passion between naval architect Ed Monk, Jr. and manufacturer Alex Chueh, has resulted in a warm global reception.

The builder's commitment to quality in all phases of design and construction is the reason Ocean Alexander specifies complete Delta "T" Systems engine room ventilation systems. All new builds in the Ocean Alexander line, from the 45' Sedan to the 98' Motoryacht, feature a fully monitored, controlled and protected engine room.

Delta "T" Systems' complete ventilation package includes an impressive array of products. Moisture eliminators keep the engine room free from corrosive sea spray and mist. Axial fans keep intake and exhaust

air flowing smoothly. Fire dampers shut automatically when needed. All components are designed specifically for marine use.

The Delta "T" Systems P/T4 electronically controls the temperature and pressure in the engine room by adjusting intake and exhaust fans to ideal conditions. This control system can be pre-set to maintain specific conditions, or can be manually adjusted for situations such as routine engine maintenance.

Fort Lauderdale yacht broker Yolanda Phinney, who facilitates delivery to Ocean Alexander customers from its Ft. Lauderdale, Florida offices, appreciates the manufacturer's personalized service. "Delta 'T' president Lynn Oien regularly meets with Ocean Alexander, advising us of the system components and how they enhance a vessel's performance," says Phinney. "He takes the time to educate customers and make them comfortable."

Ocean Alexander service manager Shane Bradley adds, "We have Delta 'T' ventilation systems in our new 78' model and a 98-footer in our yard. Delta 'T' personnel come out whenever we need them to provide service or answer questions. Simply put, their systems do what they're supposed to do – keep the engine rooms cool."

Phinney enthusiastically sums up her experience with Delta "T" over the years. "Delta 'T' gives us, and our clients, a lot of attention. They're a fantastic company. We appreciate their service and care," she said.
