PALMER JOHNSON RELIES ON DELTA "T" VENTILATION SYSTEMS

For 90 years, Palmer Johnson Yachts has stood for excellence and innovation. To assure peak performance, the builder specifies Delta "T" Systems engine room ventilation equipment. Captains and owners rest easy with their fully monitored, controlled and protected engine rooms.

"We have enjoyed a prosperous relationship with Delta "T" for more than 15 years," said Palmer Johnson's Al Spittlemeister. "As an engineer designing mechanical systems for the finest yachts in the world, it is a pleasure to work with their knowledgeable and detail-oriented staff. The quality of the product is a testament to their high standards."

Founded in 1918 in Sturgeon Bay, Wisconsin, Palmer Johnson began by building and repairing fishing boats for the Great Lakes. Today the company builds many of the world's most striking luxury sports yachts. With the flagship PJ 170 set to be released in 2010, Palmer Johnson sets the standard for sleek sophistication and breakthrough engineering.

Delta "T" Systems moisture eliminators prevent corrosion from sea spray. Marine-grade AC axial fans provide high air flow and long life. Custom-designed diverters direct air to specific hot spots and digital monitoring and control systems adjust both air intake and exhaust fans.
