### YACHT BUILDER ADOPTS NEW VENTILATION EQUIPMENT

Viking Yachts installs engine ventilation equipment from Delta "T" Systems on many of its new models, including this Viking 65 Convertible.

Building on its success in the commercial and offshore service vessel market, Delta "T" Systems continues to expand the use of its engine room ventilation products among worldwide OEMs and custom yacht builders. Viking Yachts of New Gretna, New Jersey, has now adopted Delta "T"'s moisture eliminators and axial fans as standard equipment on many of its new yachts.

Delta "T"'s moisture eliminators ensure that the air supplied to engine and mechanical rooms is free of sea spray, while axial fans provide

high airflow rates with low sound levels. Peter Frederiksen, Viking Yachts' director of communications and marketing, said, "Our yachts have always been engineered to provide proper engine room ventilation. The expanded design of our latest models has given us added space to accommodate Delta "T"'s equipment. The ventilation system will be a worthy addition to our new yachts."

Delta "T" Systems produces fans, fire dampeners, moisture eliminators and advanced electronic controls that manage airflow. These products maintain uniform conditions in machinery spaces to provide optimum engine performance and longevity.

More information on Viking Yachts can be obtained by visiting its website at [www.vikingyachts.com](http://www.vikingyachts.com).
