

VIKING YACHTS SELECTS DELTA "T" SYSTEMS VENTILATION PRODUCTS

The Viking Yacht Company uses Delta "T" Systems' ventilation products on all its vessels, including the flagship 74' (22.56 meter) Convertible.

Delta "T" Systems is the exclusive provider of moisture eliminators, dampers and cooling fans for all Viking Yachts' sportfishers and convertibles, including its flagship 74' Convertible.

After testing the moisture eliminators on a prototype, Viking personnel were so impressed with the results, the company decided to use the moisture eliminators as well as dampers and cooling fans. "Since we've begun using the Delta "T" moisture eliminators, we have not experienced water intrusion in any of our engine rooms," said Viking engineer Bill Gibbons. Delta "T" Systems' ventilation products are some of the few components not designed or manufactured by Viking for its yachts.

Delta "T" Systems' moisture eliminators prevent corrosion and engine wear by keeping air free of sea spray and mist. Mounted to the air intake vents leading to the engine room, their specially designed gutters collect and eliminate moisture droplets. The axial fans and dampers provide a flow of clean air for improved ventilation and proper engine combustion.

The family-owned Viking Yacht Company of New Gretna, New Jersey, prides itself in constructing high quality yachts. Based in Riviera Beach, Florida, Delta "T" Systems designs efficient engine room ventilation management products for recreational, commercial and military craft.
