

WESTPORT USES DELTA "T" VENTILATION SYSTEMS ON 164' LUXURY YACHTS

Complete Delta "T" Systems' ventilation systems have been installed on Westports 164' (50 m) top-of-the-line luxury yacht.

To help protect the engine rooms on its new top-of-the-line 164' trideck luxury yachts, Westport is installing complete ventilation systems from Delta "T" Systems. Designed to control moisture intrusion, engine room depression and temperature, the systems will provide optimum ventilation control.

Powered by twin 3,650 hp MTU 16V4000 diesels, the Westport 164' is built for long-distance travel with its high speed and long range capabilities. The hull's design, developed by naval architect William Garden and Westport's Taylor Olson, contributes to the yacht's performance.

Efficiently controlling the engine room's climate will keep the engines operating at peak levels. **"Delta "T" Systems provides a top quality product**

and is a good company to work with," Olson said. "We are using them on a second 164', which just went into production, as well as on other models."

Delta "T" System's high-volume ventilation package includes its new P/T4™ automated control system, moisture eliminators, stainless steel dampers, intake fans and exhaust fans. The P/T4 system features greater processing power for precise fan control and faster response to changes in engine room pressure or temperature.

Customized for Westport, the moisture eliminators prevent corrosion and engine wear by ensuring that air supplied to the engines is free of sea spray and mist. Constructed of 316 stainless steel, the A-60 fire-rated dampers have a long service life. The 32" diameter intake fan can draw in 31,200 cubic feet of air per minute, while the 24" diameter exhaust fan expels 14,100 cubic feet per minute.

Westport, one of North America's largest luxury yacht manufacturer, is building the composite 164' entirely indoors at its Port Angeles, Washington, facility. The first 164' yacht is scheduled for launch in early 2006. The company also produces 98', 112' and 130' yachts.

Based in Riviera Beach, Florida, Delta "T" Systems creates reliable and efficient marine engine room ventilation management products for commercial, recreational and military vessels.
